Mr. J. H. Hale and 10 crates of his wonderful J. H. Hale peaches. Mr. Hale began picking the J. H. Hales four days before Elbertas, and continued picking long after Elbertas were gone. His J. H. Hales paid him 66 to 100 per cent more profit than his best Elbertas.

"The J. H. Hale--America's Greatest Market Peach," Say Growers Everywhere

This year saw the largest crop of peaches ever raised in America. It was a condition that will probably not be duplicated again for years. But never before has there been such an opportunity for growers to test the value of different varieties. Never before has it been so emphatically demonstrated that it pays to plant quality fruit and that quality fruit sells at fancy prices, though the markets be flooded with common peaches.

The season of 1915 proved it. In the open market and in carload lots, J. H. Hale peaches not only brought the highest prices of any peach of its season, but these prices were just double those obtained for ordinary varieties.

Read what Mr. Hale says: "Aside from its greater size, firmness of texture, beauty, and high quality and eating value, the J. H. Hale outyielded the Elberta and saved our financial lives in this year of low prices by selling from the beginning to the end of the season for from 90¢ to $1.25 per half-bushel basket, when highest grade Elbertas sold at from 40¢ to 65¢—and at that our Elbertas brought 12c to 15c higher than any others going out of the State."

Even at the end of the season J. H. Hale peaches were selling on the fruit-stands in Hartford, Connecticut, at 60¢ per dozen, which is the price dealers were getting for other later varieties by the half-bushel basket. While few Elbertas and common varieties showed a profit in the East this year, many of Mr. Hale's J. H. Hale trees netted him $4.00 to $5.00 per tree.

Think what you would have made had you had an orchard of J. H. Hales. The opportunity is yours now. Plant an orchard this season. You can't get started too soon with a money-maker like this. J. L. Pelham, former secretary of the Kansas State Horticultural Society, says: "There will probably be 20,000 bushels of peaches here this season, but if I had J. H. Hale peaches, I would sell them all." Read the letters from other growers whose J. H. Hales fruited this year. Here is evidence from every peach-growing section—the proof you want that the J. H. Hale is the greatest market peach ever introduced in America.

Genuine J. H. Hale Peach Trees, Bearing Trade-marked Tag with Mr. Hale's Personal Signature, Grown and Sold Only by

The J. H. Hale Peach Now Fruiting in Every Peach-Growing State

Read These—“Will Take the Leading Place in Commercial Peach-Growing,” “The Winner in Peaches,” “Welcome by All Fruit-Growers,” “Best Canning Peaches”

It is unusual for peach trees to bear before they are three to four years old; but hundreds wrote us this summer that their young J. H. Hale trees set in the spring of 1913, and even in 1914, bore fruit this year. The letters came from every section of the country—from Connecticut to California, from Michigan to Alabama. Read what they say. Here is the proof you want that the J. H. Hale is the best peach for you—the peach that will sell at premium prices, no matter what the market is. The J. H. Hale thrives and succeeds wherever the Elberta grows, ripens a week before Elberta, and, best of all, its size, quality, color, flavor, keeping, and shipping qualities command prices which no Elberta can equal sold in open competition in the same market.

From New England States

Massachusetts—“The J. H. Hale is a worker, and we have decided to make planting of this variety on our farm next spring.”—Prof. Frank A. Wadgh, Massachusetts Agricultural College.

Massachusetts—“The J. H. Hale makes all other varieties look very insignificant. The plants will appreciate the lack of fuss, as fuss is very irritating on a hot day.”—G. H. Brown (Norfolk County).

Massachusetts—“The J. H. Hale have an enormous growth. Nearly all of the three-year-old trees have peaches on them.”—H. Russell Birmingham, M.D. (Worcester County).

Massachusetts—“Many peaches formed, but I picked most of them off so as to let the growth go into the trees. We have had terrific winds and simply blew off most of the Elberta peaches, but on our J. H. Hale trees the fruit still clings, and grows in spite of the weather. The Elberta fruit is a year later, and are supposed to be considerably stronger, and are set in better soil.”—Geo. C. Sanborn (Worcester County).

Massachusetts—“We have had very dry weather here. Nevertheless, the young J. H. Hale trees had peaches on them. I am going to make a larger planting next spring, and will set out more J. H. Hale.”—D. F. Underwood (Barnstable County).

Massachusetts—“The J. H. Hale trees are making a beautiful growth. They bloomed and set fruit this year, which I removed to keep them clear to go into the tree. They are certainly doing fine, and I am in hopes of a good crop next year.”—R. J. Bacon (Hampden County).

Massachusetts—“The J. H. Hale trees have made an unusual growth, and have a number of peaches on them. The trees are symmetrical in form, and will make handsome trees.”—Mrs. Edward Southwood (Norfolk County).

Massachusetts—“The J. H. Hale trees have peaches on them this year, and have done unusually well for three-year-old trees.”—J. W. Andrews (Bristol County).

Rhode Island—“I picked a number of J. H. Hale peaches from my young trees. They were a beautiful color, good flavor—everything you could wish. I am much pleased with the habits of the trees. It does not make an excessive wood growth, as some peaches do, but short, stubby, hardy branches, which make a good crop of fruit. All the trees I got from you are doing fine. I would have had thousands of dollars better off had I known about William P. Stowe’s series when I planted my first orchards.”—Andrew Walker (Newport County).

Rhode Island—“The J. H. Hale peach is a splendid variety for the small family. We have three or four dozen peaches on it. When the fruit gets ripe, we will try to send you a picture.”—Joseph A. Shaw (Providence County).

Pennsylvania—“This is the first time I have had an opportunity to make a study of the J. H. Hale peach, and I am glad to say I am very much pleased with the variety. It will undoubtedly become one of our very best peach varieties.”—J. P. Stewart, Experimental Pomologist, State College.

Pennsylvania—“The J. H. Hale trees I got from you in the spring of 1913 are doing fine. I never saw trees grow so fast. They surely are early bearers, as each of the trees I have has been in bearing for the past two years.”—A. A. Hinkrake (Indiana County).

Pennsylvania—“On September 6th I placed three J. H. Hale trees in my three-year-old peach orchard, and have 1,000 peach trees of different varieties, and I wish, they were all J. H. Hale.”—C. R. Hinkrake (Indiana County).

Pennsylvania—“I wish I had room for more J. H. Hale trees. This is the best variety of peach I have ever planted. They were not picked the first or second year, and the fruit is a very long season.”—J. A. B. Rittel (Lancaster Co.).

Pennsylvania—“I wish I had room for more J. H. Hale trees. They bore this year, and took very good pruning for a crop next year. Your trees were better picked and packed and reached me in better condition than any I have ever received from all other sources. I am entirely satisfied.”—E. B. Hoyt (Lancaster County).

Pennsylvania—“The J. H. Hale make the best showing last season of any in our orchard of over fifty varieties.”—W. G. Williams, Westmoreland County.

Pennsylvania—“I have 1,000 peach trees, but the J. H. Hale are the finest of the lot. Anyone can pick them as they are stronger and hold longer than all of the others.”—J. W. Edg (Bucks County).

IN MICHIGAN

“Our J. H. Hale peach tree planted in 1913 set seven peaches this year. A storm blow off all but four, which ripened into perfect fruit. Beautiful in appearance, a good flavor, fruits very early.”—V. C. Suehs (Calhoun County).

IN KANSAS

“We canned five quarts of the finest peaches I have ever seen, from our two-year-old tree. Large, firm, and excellent flavor. I am convinced that it is the best peach on the market.”—J. E. McNeil (Chautauqua County).
New Jersey—"Several of the young J. H. Hale trees have fruit on them this year. One of them had 76 peaches on it."—Gromer Jacobs (Bergen County).

New Jersey—"I am sorry that I cannot send you a photograph of my J. H. Hale trees. They bore this year; have made a wonderful growth and fruited heavily this year. One of the peaches measured 12 inches in circumference and weighed over 4 pounds. The color, the shape, and, in fact, in all respects, everything that could be desired."—A. P. SUNKIN (Cumberland County).

New Jersey—William Balantine, near Paterson, N. J., has 100 J. H. Hale trees, and this year had several bushels of choice fruit to give away to friends as wonderful. —Henry H. (Bergen County).

New Jersey—"To say that I am pleased with the great success of the J. H. Hale peach is stating it mildly; I shall bend every energy to putting in all I can."—T. M. GRAY (Gloucester County).

New Jersey—Half-bushel—"I have a half-bushel of J. H. Hale peaches to bring home with us. These peaches did not show any signs of decay for more than two weeks. They must be put into a good place at once."—M. E. BALE (Horticulturist, New Jersey Experiment Station.

Delaware—"You have asked us why we are planting the J. H. Hale peach. Last summer, at picking time, we went to Connecticut to see the varieties. It was fruiting side by side Elbertas; both varieties were loaded with fruit, but the J. H. HALES far surpassed the Elberta, it being twice the size of the latter, highly colored, free from any blemish or defect, and of a much superior quality. I consider it the greatest peach grown. Mr. J. H. Hale gave us a bunch of J. H. Hale peaches to plant in Delaware and we have put them in the ground."—F. M. SOBER & SONS, Magnolia, Delaware.

Maryland—"One of my friends had a tree which bore about two dozen J. H. Hale peaches. I saw them today. They are just getting ripe, and I will say that it is the finest yellow peach that I ever saw; larger than Elberta, of fine color, better shape, and more uniform in size. They will be no rival of Elberta, even when grown near the J. H. Hale tree. Two-Tones (Washington County).

Maryland—"The J. H. Hale trees have made a tremendous growth. There are several peaches on them, but not ripe at this writing. I am very much pleased with their growth, especially in bloom. (Baltimore County)."

Maryland—"The young J. H. Hale peach trees purchased from you three years ago are bearing this year. The crop is as heavy as it should be for trees of that age. The fruit will be ripe about August 25th, and it looks as though it would be of good size and color. The variety looks very promising for the future."—LEVISON (Washington County).

Maryland—"My J. H. Hale trees are very full and the fruit of the finest I have ever seen. The trees made better growth than any others I had, and I have an orchard of 250 trees. The fruit is not quite ripe; and, I think, will be about as good as August 25th. I have trees of each variety, and have a variety of them all growing. They are not quite ripe when he wrote."—J. S. KIMBER (Carroll County).

In Arkansas—"Our J. H. Hale peaches measured 1015 inches in circumference. Beat Elberta in size, color, and flavor. Our tree bore half-bushel of fine fruit."—E. N. HOPKINS, Editor "Arkansas Fruit and Farms."
Missouri—"The J. H. Hale peach is a beauty. The more I see of it, the more I am convinced that it is destined to take a leading place in commercial peach-growing."—J. C. Wurts, University of Missouri.

Missouri—"The J. H. Hale peach is a great revelation to me. I had heard that it was devolved of fuzz, and had formed the idea that it was a nectarine. However, it is a true peach, and, if I am not mistaken, is a peach of the first order. It seems to be all that the Eiberta is and a good deal besides."—Professor W. L. Howitt, Department of Horticulture, University of Missouri.

Missouri—"The trees offered from you grew fine, and we did not lose one tree. One of the J. H. Hale peach bore this summer. We want more of that variety."—C. A. Bittner, St. Charles County.

Missouri—"Our J. H. Hale peach trees have done well in growth. One of them bore this summer."—T. E. Palmer (Jasper County).

Missouri—"One of our J. H. Hale trees set out in the spring of 1913 bore 50 peaches this summer. They were beautifully colored and fine in quality, and size, without the bitterness of the Eiberta."—Vivian Smith (Newton County).

Kansas—Several of the J. H. Hale peaches we grew on our farm were larger than the ones you sent. One of our weighed an even pound, and measured 11 3/4 inches in circumference. The size and appearance together with the firmness, certainly make valuable peaches."—Granite City Orchard Co.

Carolinas—"Mr. Hales I got from you the spring of 1914 have a few peaches on them this year."—J. B. Edwards (Yancey County).

North Carolina—In December, 1913, our one-year-old J. H. Hale tree was sent to the United States Department of Agriculture in Washington. They are making the future rain and so far are doing quite well. We are very much pleased with it."—E. J. Bevan (Washington County).

Tennessee—"The J. H. Hale peach trees purchased from you two years ago came into bearing this year. I am very much delighted with the quality of the fruit and the wonderful success we have had in our county.

Oklahoma—"One of my one-year-old J. H. Hale peach trees has set four peaches. That is going some, is it not? Please give me prices on more J. H. Hale trees as soon as possible."—W. F. Marson (Oklahoma County).

California—"I have had a number of J. H. Hale peach trees in my orchard for the past three years. We have been growing peaches for many years, but never had anything to compare with the Hale. The trees are fine as far as form is concerned, and they are a delight to look at. The fruit is excellent in every particular."—C. W. Stagg (Chatham County).

California—"The J. H. Hale tree is such a beauty that I have purchased another tree this year."—W. E. Miller (San Benito County).

California—"The J. H. Hale peach is not only a fine peach, but is also a very beautiful peach. The trees are magnificent and the fruit is delicious."—C. W. Williams, Wickenburg, Arizona.

California—"The J. H. Hale tree is a beautiful tree and the fruit is excellent."—J. B. Edwards (Yancey County).

California—"My J. H. Hale trees are more than 10 feet high and well shaped."—A. T. Walker, University of Kansas.

Nebraska—"The J. H. Hale has made a prodigious growth. They stand this climate fine, as last season we had an extreme cold in February, and the winter was an extremely cold and stormy one."—A. D. Spencer (Gage County).

From Southern States

Alabama—"The peaches on my young J. H. Hale trees were 30 per cent larger, the color highly colored and better flavored than Eiberta. Also, a perfect freestone."—C. W. Stagg (Chatham County).

Alabama—"We have some very fine J. H. Hale peach trees from trees you furnished us. I am interested in the J. H. Hale peach."—D. E. Aldridge (Atoka County).

Alabama—"Our J. H. Hale peach trees made excellent growth. The fruit is excellent in every particular. These trees have a wonderful bearing quality."—J. W. Howard, Ramer, Marshall County.

Arkansas—"We consider the J. H. Hale of greatest commercial value. Beautiful yellow peach, extra solid, good keeper and shipper. We were delighted with the size of them and the color."—Mr. B. J. White (Caldon County).

Arkansas—"The J. H. Hale is a fine peach, larger, better flavored and earlier than Eiberta. A large number are being planted in this section."—W. L. Robert, Wickenburg, Arizona.

Arkansas—"I bought three J. H. Hale peach trees from you in the spring of 1913. They all have peaches on them now—one year since they were set out."—D. W. Underwood, (Phillip County).

Georgia—"Our J. H. Hale trees blossomed this season, and bore a number of very nice peaches. Much better than Eiberta. The J. H. Hale is the most promising peach that I have ever tested."—J. E. Favor (White County).

Georgia—"Folks who saw the J. H. Hale peaches said that they were the finest they had ever seen, and would not believe such peaches grew if they had not seen them with their own eyes. They were as good as they looked."—Dr. J. H. Smith, General Manager of the Georgia Fruit Exchange, Atlanta.

Mississippi—"My J. H. Hale trees, now in third year, bore good crops notwithstanding the high hot days and withstanding northeast winds that baffle the fruit growers. The peaches arrived the fruit at its best, and made astounding growth."—J. V. Smith-Vance (Madison County).

North Carolina—The most desirable peach we have ever seen. The size and appearance, together with the firmness, certainly make valuable peaches."—Granite City Orchard Co.

From the Pacific Coast

California—"Harvested my crop of J. H. Hales, and they exceed your ad in color, taste and quality. I am sure I have grown the finest peaches that I have ever seen."—J. M. Winter (Lassen County).

California—"The J. H. Hale is king of the peach world. Our trees were loaded this year. We picked as many as 300 peaches off some of the trees. They have a short crop this year and composed of four to five peaches each. The peaches are fine in flavor—many so large I could not get them in glass jars with a 3½-inch opening."—P. S. Warner (Los Angeles County).

California—"Well colored, both the Eiberta and the best peach for slip- ping me over,"—A. P. Pleiars (Yolo County).

California—"The J. H. Hale peaches you sent me July 23rd from the barrel at my house in Redlands, California, were the best peaches we have ever eaten. The trees have been grown by every one who saw the fruit as being something beyond the ordinary in the peach line."—G. A. McCready (Los Angeles County).

California—"My J. H. Hales are doing fine. They are high as my head now."—J. W. Chandler (Hamilton County).

This picture will show you the tremendous growth our one-year-old J. H. Hale trees have made to date. As to the fruit, the J. H. Hale peach is superb. It holds its quality twice as long as any other peach I know. It would go to Europe from California, if packed right."—Parker Eakin, Pasadena, California. Mr. Eakin is a director of the Redland Heights Co., of Pasadena, who plans to set out 15,000 J. H. Hale Peach trees in California.
"We began picking the J. H. Hale four days earlier than Elberta, and they lasted longer. Practically no drop when over-ripe, while the Elberta, along side, had ten drops to J. H. Hale one. Outyielded Elberta in bushels, doubled it in size (not on a few pet trees, but in the whole orchard); sold at wholesale in car lots daily at prices from 60 to 100 per cent above Elberta in the same market, so that profits, tree for tree, in the same orchard, were four to five times greater than Elberta. In fact, owing to the great crop and low prices, very few Elbertas in the East showed any profit this year, while many of our J. H. Hales netted $4.00 to $5.00 per tree, partly on account of size and yield, but largely on account of the extra price realized. The J. H. Hale has yield, size, beauty, and great shipping endurance, combined with superior eating quality—a combination of commercial and table qualities never before found in one peach."—J. H. Hale.

Washington.—The young J. H. Hale trees have made a growth, in two years, to three inches in diameter. Some of the trees are bearing, and it is growing extra fast.—H. A. Brain (Pierce County).

Washington.—Our three-year-old J. H. Hale trees averaged 15 to 20 peaches to the tree. These peaches were 104 inches around, and weighed 10 ounces each. Far better quality than Elberta. We are so far from the market, the J. H. Hale will make a fine shipper, and it is very hardy.—H. A. Bondwell, Yantis County.

What Commission Men Say.

The final test is the market. Here is what the biggest peach-buyers in the country say about the J. H. Hale peach:

Would Carry Without Ice. —"The J. H. Hale is the best grade of peach I have ever seen in flavor, color, and size. I believe that this peach would carry to distant markets without refrigeration. Sorry to say that so far we have been unable to get enough to supply the demand."—A. J. Berlin, Gordon Bros., Hartford, Conn.

Besta Elberta.—"The J. H. Hale is far superior to Elberta, and, all points considered, the finest yellow peach I have ever seen."—S. T. Nelson, Wm. Warn-ker & Co., Philadelphia.

What Buyers Want. —"It is indeed a wonderful peach, one that will catch the buyer at first sight. Have had this peach on our desk for eight days and it is in excellent condition. We believe the entire community would be benefited by such a peach."—Barbary Bros., Chicago.

Best in 25 Years. —"I think there has never been a better peach, as regards color, quality and keeping condition, in New York in my twenty-five years' experience in the fruit business."—Adam Miller, Inc., New York.

A Hit on Any Market. —"The J. H. Hale possesses everything pertaining to keeping qualities that one could desire. We would strongly urge propagation of this variety for general sale. There is no question but what it would make a hit on any market."—M. O. Cogswell Co., Pittsburgh, Pa.

What Horticultural Experts Say.

The opinion of the leading horticultural authorities from the country's foremost universities and agricultural experiment stations is unanimous that the J. H. Hale is the world's greatest commercial peach. These men have tested thousands of varieties, and when a peach of the value of the J. H. Hale arrives, they are the very first to recognize its superiority.

A Great Business Peach. —"The J. H. Hale is large, well colored, and almost entirely free of the fuzzy or down that usually covers peaches. The shape of almost every specimen was round, being in size also quite different from Elberta, which is distinctively oval and quite fuzzy. The flavor of the J. H. Hale is very good. As a business peach, there is nothing wanting in the J. H. Hale."—The late Prof. H. E. Van Deman, former U. S. Pomologist, Washington, D. C.

In All Ways Superior to Elberta. —"The unanimous opinion of our Horticultural Staff is that the J. H. Hale is a very fine peach, in all particulars of fruit superior to the Elberta. Everything I could hear about the character of the tree, its hardness, fruiting ability, etc., is also to its credit. We think we will have to make some plantings of this variety at once. I congratulate you on bringing out such a good thing."—Prof. F. A. Wash, Head of Division of Horticulture, Massachusetts Agricultural College.

Ranks Above Elberta. —"There is no question about the J. H. Hale peach being larger and more beautiful than the Elberta, and that it will ship better than Elberta. After a thorough test of the quality of the two varieties, I shall have to say that the J. H. Hale ranks higher in quality than the Elberta."—U. P. Herance, Horticulturist, New York Agricultural Experiment Station.

From the Dean of American Horticulturists. —"The J. H. Hale is very attractive, perfectly free, yellow flesh, good quality. I like the shape and general appearance of the peach. It should be a good market variety."—Prof. L. H. Bailey, Director, New York State College of Agriculture, Cornell University.

Has a Great Future. —"I consider Mr. Hale's new peach a wonder. It undoubtedly has a great future, and I congratulate you on securing the marketing of it."—T. B. Symonds, Maryland State Horticultural Society.

Far Superior to Elberta. —"I kept some of the J. H. Hale peaches a week after bringing them back from Port Valley. The flesh was firm and in fine edible condition. In shipping qualities it is superior to Elberta. The J. H. Hale has many of the Elberta characteristics with firmer flesh and better quality."—M. A. Blake, Horticulturist, New Jersey Agricultural Experiment Station.

A Decided Acquisition. —"The J. H. Hale is very large, well colored, yellow flesh, a perfect freestone and of higher quality than Elberta. The flesh is firm and it should be a good shipper. I consider it a decided acquisition."—T. W. Hume, Director, Virginia Agricultural Experiment Station.

Valuable Variety. —"The color is so brilliant, one would think the peach ready to eat. There should be an excellent future for this valuable variety."—E. D. Sanderson, Director, West Virginia Agricultural Experiment Station.

Should Be Planted Commercially. —"The J. H. Hale peach orchard is about the handsomest sight I ever saw in the way of a crop of peaches. The fruit itself is very solid and roundish, containing more fruit to the cubic inch than anything I have ever seen on a peach tree. I am glad to know this peach is to be put on a commercial basis, as I am sure that it has value."—Prof. F. C. Sears, Massachusetts Agricultural College.
Be Sure You Get
Genuine J. H. Hale Trees

Look for J. H. Hale's Autographic Signature on Tag

Be on your guard against fakers and impostors offering worthless imitations of J. H. Hale peach trees. Attempts are being made to substitute so-called "J. H. Hale peach trees," and an old variety of no commercial value known as "Hale's Early."

Mr. Hale has never furnished any buds, scions, or propagating wood from his genuine J. H. Hale trees to anyone but William P. Stark. He has appointed the William P. Stark Nurseries, Stark City, Missouri, the sole and exclusive growers and distributors of genuine J. H. Hale peach trees. For your protection, we put a trade-marked wooden tag with Mr. Hale's personal signature, as shown here, on all genuine J. H. Hale peach trees. Look for this tag. Refuse trees without it. To get genuine original J. H. Hale peach trees, order direct from William P. Stark Nurseries, Stark City, Missouri.

"My contract with the William P. Stark Nurseries for propagation and sale of my trade-mark, 'J. H. Hale Peach,' is an exclusive one with that company, and no one else in the world has any legal or moral right to propagate and offer for sale any trees of the J. H. Hale Peach. This Peach being trade-marked, all would-be propagators, buyers, or planters are hereby warned that any infringement of my right or the rights of the William P. Stark Company in this Peach may subject all to serious penalties."—J. H. Hale.

Look for This Tag

Prices—Genuine J. H. Hale Peach

X size (2 to 4 feet) each, 30c; per bundle of 10, $2.50; per 100, $20.00; per 1000, $175.00
XX size (4 to 5 feet) each, 35c; per bundle of 10, 3.00; per 100, 25.00; per 1000, 225.00
XXX size (5 to 7 feet) each, 40c; per bundle of 10, 3.50; per 100, 30.00; per 1000, 275.00

Peach Ripening Dates

The following chart of peach ripening dates covers approximately 97 days—from Mayflower, the earliest, to Mammoth Heath Cling, the latest. With the Mayflower and Elberta as a standard of comparison, you can select peaches best suited for your locality. For home use you can have fresh, ripe peaches throughout the season of three months. The date given is for the maturity of the peach, when it is ready to pick and ship, and not when it is dead ripe on the tree, which will be a few days later. Sometimes it pays to make two different pickings, the last being a week or two later than the first—depending on the season, the variety, and the condition of the crop.

Order Your Trees Now for Early Planting

You can't afford to let another season go by without getting a J. H. Hale peach orchard started. It is the peach the largest growers are planting by the thousands—men like Bert Johnson, Highland, Arkansas, with 10,000; Redland Heights Ranch Company, 15,000; F. M. Soper & Son, Magnolia, Delaware; Roland Morrill, Benton Harbor, Michigan; E. J. Bryan, Warrior, Alabama; Cherrmont Mountain Orchard Company, West Virginia; and scores of others, with from 2,000 to 5,000 trees. These men know peaches and peach markets. They want a winner and so do you. Order your trees now, before our stock is exhausted.
